

## Announcement of specification change

We would like to inform you the specification improvement of VS-LD75 as follows;

Model : VS-LD75

Change : We added three holes for lock screws on tip of focus ring.

These extra holes are to improve image stability from more robust fixation. The new design will meet the harsh requirements in machine vision applications.

Note :

- There are no changes in dimensions, optical quality and price.
- Once we clear previous design model stock, we will start shipping the new model.
- If you fix with this extra hole before adjusting iris, iris will be fixed at the same time.  
Please adjust the iris before fixing this extra hole screw.
