Notice on the Partial Exterior Changes of the SV-LMP Series

We gratefully thank you for your ongoing patronage for our products and services.

In light of the ever increasing demand on new machine vision applications, especially in the field of factory automation, which requires even higher quality and stronger durability of the lenses, the SV-LMP Series has undergone several exterior feature changes including modifications on the external front lens rim and the wall thickness of the focal adjustment section. In addition, the material of the C-mount section has been replaced from the original aluminum to brass.

For detailed changes on each model, please refer to *A Comparison Overview on the Exterior Mechanical Changes of the SV-LMP Series*.

Please note that the exterior mechanical changes do not affect the optical properties and the pricing of the lenses as compared to the old design.

The timing of the design switch will take place as in order of production lots.

Please kindly offer your understanding of the above announcement. Your continued support and patronage for our products and services are greatly appreciated.

【For Inquiries】 Please contact our Tokyo Headquarter Sales Dept.
